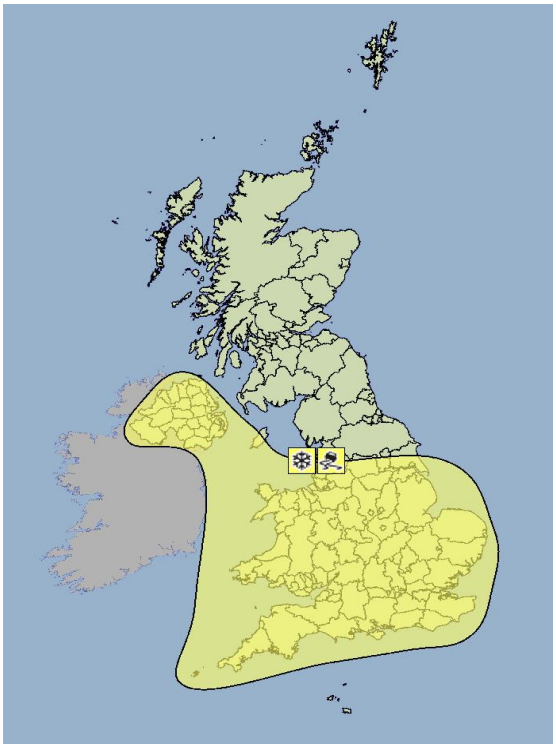
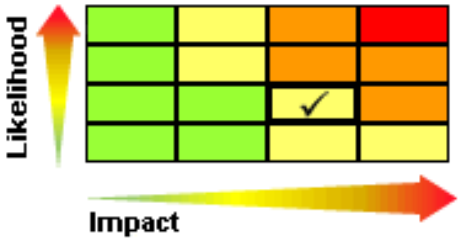
National Severe Weather Warning Service





Chief Forecasters Assessment
Further spells of snow could continue to move north through Friday, with the potential to produce widespread snowfall, accompanied by strong winds - although the winds will tend to ease through the day. Amounts of snow are likely to be highly variable. Currently Wales, parts of Southwest England and The Midlands are most likely to have the largest amounts of snow, with the potential for an additional 5-10 cm here.

This warning has been updated to restrict the warning to just Friday. The warning has also been changed from a combined snow/wind to a snow/ice warning to reflect the increased likelihood of icy stretches forming through Friday evening.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **00:05 on Fri, 02nd Mar 2018** until **23:55 on Fri, 02nd Mar 2018**

Further bands of snow, heavy in places, are likely to spread north across parts of England, Wales and Northern Ireland during Friday. Through Friday evening ice may form on untreated road and pavements, particularly across southern England and parts of South Wales.

Delays and cancellations to public transport are possible, as are delays to travel on roads; some stranding of vehicles and passengers could also occur. Some rural communities could become cut off. Interruptions to power supplies and mobile phone coverage are also possible.
